

MGT 402A

Markets and the Firm

Winter 2023

Professor: Brett Saraniti
E-mail: brettsaraniti@gmail.com
Cell: (808)258-7701

Class Sessions: Wednesdays 9:00am-12:50pm
Office Hours: see canvas site

Course Overview

What trends in future prices can you expect for a particular good? Should you increase, or perhaps decrease your production capacity? How should you price a good for which you have market power? Should you expect government to intervene in or regulate your industry? If you change the price of a good, how should you anticipate your competitors will respond to your action -- and how should you respond to their actions? All of these questions are informed by economic analysis. This course will enhance your understanding of important economic models while examining their implications for pricing, price leadership, capacity management, market entry and exit, and other key business strategies. Importantly, we will see that competition is fundamental to understanding why markets may function well, and hence business strategy must anticipate the existence and actions of potential competitors in order to create and capture value. We will also understand when to expect governments to intervene in markets because markets fail or because the government had been persuaded to intervene by some key stakeholder. Businesses require the ability to understand, forecast and influence government intervention in their industry. More specifically, by the time you complete this course:

1. You will learn how to construct fact-based, logically grounded *analysis of major strategic bets in hypercompetitive markets*. We will develop the concepts of *short-run and long-run supply curves* and relate them to costs.

- This will allow you to make educated conjectures about the path of prices in such markets, predict the range and magnitude of price fluctuations, and conduct financial evaluation of strategic decisions such as capacity expansion or new market entry.
2. You will learn how to **identify the costs categories** that are relevant for critical business decisions such as supply, capacity abandonment and exit, and new market entry.
 - The typical costs of a business fall into numerous categories, and mistakes in identifying which of these categories truly matter for a decision at hand can lead to outcomes that impair a business's competitiveness and destroy profitability.
 3. You will learn the basics of **game theory**: how to represent strategic interactions between firms in markets as games and how to predict the outcome of such games using Nash equilibrium.
 - We will use game theory to understand strategic moves key industry players can execute to change the nature of their industry and create win-win environments via **price leadership**.
 - Sometimes an industry will be win-lose and we will use game theory to study how to win in those settings.
 4. You will learn how the interplay between cost and demand fundamentals **determines profit-maximizing pricing decisions**.
 - Pricing is one of the most important business decisions and an understanding of the role of economic fundamentals can translate directly into more profitable pricing decisions.
 5. You will learn when markets fail.
 - We will define and explore the key concept of **externalities** and study how it underlies everything from global warming to national defense to technology adoption. We will study how business strategy in such environments can influence the evolution of the entire market and create and capture significant value.
 - We will define and explore the key concept of **adverse selection**. Healthcare and finance are key sectors of the economy where markets can fail because of adverse selection. You will understand how **cream-skimming** can capture value
 6. You will be able to understand and even forecast how **government interventions** help shape prices and the distribution of value in competitive markets.
 - We will learn that **taxes and subsidies** can be used to increase total value from trade when there are market failures. You will get some insight into how and why a government might intervene in your industry.
 - You will also learn that there is **government failure** and government intervention can reduce value and create winners and losers. This can help you spot opportunities for using institutions in the non-market environment of your business to capture additional value or prevent the capture of value at your expense by others.

Class Preparation

The material to be prepared for each session is detailed in the tentative course outline below. **Each assignment is required, unless explicitly described as “optional.”** There are several categories; each category requires a different type of preparation, as follows:

Team Homework Assignments

A written answer is required to be submitted **on Canvas prior to the beginning of class in which the homework is due**. The assignments are graded within a week after they are collected. When no homework or exercises appear in a given session then none are required.

Cases

You are required to prepare all cases covered in this course. Most cases are preceded by a set of discussion questions that should guide you in your preparation.

Current Affairs

You will see that I really enjoy talking about economically-relevant current events in class. I will try as much as possible to discuss current and recent events. Some of the recent articles are in the syllabus, and I will add more as the quarter goes on. If you have materials that may be worth discussing, from the media or from your own experience, please send them to me!

Moblab

On several occasions we will be running live experiments in-class using a mobile platform called Moblab. You will receive instructions in class on how to sign up for the platform. You may use a laptop or the Moblab app to engage with the platform. Cool!

UCD Honor and Etiquette Codes

The Code of Academic Conduct requires that a student not seek an unfair advantage over other students, including but not limited to giving or receiving unauthorized aid during completion of academic requirements; to truthfully represent fact and self at all times; and to respect the property and personal rights of all members of the UCD community:

<http://sja.ucdavis.edu/files/cac.pdf> I will interpret the honor code in the following ways in this course.

Exams: You may study for exams with others. However, once the exam has begun, you should have absolutely no communication about the exam with anyone inside or outside the class.

Homework: All assignments group assignments and must be done with members of your group only. Do not consult with others who have already taken the course or use their submissions. If you have questions about whether behavior is within the bounds of honorable behavior, please ask. The watchword should be: when in doubt, ask.

Classroom Etiquette:

- See details on canvas for all course modalities

Course Materials

1. **Canvas:** All readings, required and optional (with the exception of the optional textbook) will be made available on Canvas. The same is true about some videos. Slides will also be made available after the class.
2. **VERY Optional Textbook:** Besanko, David and Ronald R. Braeutigam, *Microeconomics: An Integrated Approach*, New York, John Wiley & Sons, 2007, **third edition** (hereinafter B & B). This book relies on more knowledge on math than what I plan to require. Thus, if having more math would help you understand the material, you are welcome to consult the book; otherwise the book would not be helpful.

There are newer editions but they are more expensive and the new material is not relevant for the course. If you want a textbook, you should buy a *used third* edition from, say, Amazon: http://www.amazon.com/gp/offer-listing/0470049243/ref=sr_1_1_olp?ie=UTF8&qid=1320685145&sr=8-1&condition=used
All references below relate to the third edition but feel free to ask if you want help mapping into the relevant material in the edition you have.

Attendance and Class Participation

Attendance, preparation, and participation are expected and represent an essential component of the learning experience in this course. I evaluate class participation based on the ***quality of participation***, not its “quantity.” You should provide insights, observations, inferences, or conclusions that not only express your viewpoint, but also defend your analysis. Your comments should be relevant to the topic at hand, and should advance the discussion. A simple opinion or viewpoint is not very valuable without any justification. I value comments that respond to, elaborate on, lend support to, contradict, or correct a comment by one of your classmates. Counter-productive comments include opinions without a justifying argument, pure repetition of previous points, class interruptions that do not advance the discussion and rambling, vacuous or disparaging comments.

I will cold call in class, both to give you an incentive to prepare for class, and to make sure the discussion does not collapse to a handful of students. At a minimum, everyone in class should be prepared to answer all of the preparation questions handed out in advance.

Missing class: Class attendance not only provides an opportunity to participate in the discussion but to learn fundamental material. If you must miss class, you should do the readings, prepare, and turn in the assignments on time (late assignments will not be accepted), and arrange to get notes from a friend about what you missed in class. I will post the presentation slides on the course page on Canvas following each lecture. Excessive absences will affect your final grade even more dramatically.

Grading Components and Guidelines

Course score before adjustments:

This score is based on the following components:

1. In-class midterm exam, 40%
2. In-class final examination, 50%;
3. Homework assignments, 10%.

For each student the higher of two scores is used in the final course grade:

1. The score based on the percentages above; and
2. The score with the same weights for homework, but where the final exam counts for 90% and the midterm carries no weight.

This means that the midterm will count only if it can help improve your overall position.

Midterm and Final Exams

Midterm: Wednesday Feb 15, 2023

Final: Wednesday March 22, 2023

IMPORTANT:

The *two exams* will not be offered at any other time and for any reason other than a documented medical condition or for official UCD events. No exceptions are made for any other reasons.

How to study for this course

This course aims to give you a fundamental understanding of microeconomics and to apply this knowledge to business decision-making. We do this by introducing new material every week with associated homework assignments. You need to pay constant attention to understand the key ideas and get the most from the course. Here is my advice on how to do this:

Come to class prepared. Read the cases and attempt the exercises before class.

Engage in class discussion. In terms of participation, everyone is different. Regardless, engaging means both listening critically to what other people are saying in order to evaluate whether you think their arguments are right, and speaking up when you think you have something to contribute.

Practice. When you read the newspaper or see interesting articles on the web, use the fundamental microeconomics you are learning to understand the issues at a deeper level and come up with your

own critical ideas (and feel free to discuss those with me). The homework assignments will also help you to do this. They will also prepare you for the exams so you should take them very seriously. Before exams, extra practice problems will be posted on Canvas and you should do them too.

Course Outline

The detailed course outline is available on canvas. It is separated by session with direct links to most readings. The links on canvas should go directly to the item, when noted, some may need the [library VPN](#) before the link will work. A handful of items in **bold** are found on study.net as noted.
